

EYES TO THE GROUND. MINDS TO THE HORIZON.™

SIGNATURE CONTROL SYSTEMS, INC. IS PLEASED TO ANNOUNCE  
THE GLOBAL RELEASE OF OUR NEW  
**MICRO IRRIGATION PRODUCTS**

This new product line features groundbreaking Pressure Compensating technology, ensuring more efficient water usage when irrigating shrubs, lawns, container plants and flowerbeds by maintaining uniform water flow rates through all pressures.

The products also more effectively target specific plants, further increasing water efficiency and savings by applying small quantities of water directly above the soil surface. Whether in the form of discrete drops, continuous drops or tiny streams, this technology allows water to drip slowly to the root of the plants.

Unlike conventional spray-head nozzles that disperse water at much higher rates than sometimes necessary – particularly those closest to the inlet – Signature's new Pressure Compensating technology ensures uniform water spray and dispersement rates, regardless of the actual pressure coming in from the source.

**The Pressure Compensating technology is available for drippers, mini-bubblers, drip spikes, sprays, jet sprays and sprinklers.**

These new Micro Irrigation products, along with Signature's patented irrigation control technology solutions, allow homeowners, municipalities and businesses to meet tough new water efficiency standards while still enjoying attractive gardens or lawns at significantly reduced landscape maintenance costs.

For more information about the full line of new Micro Irrigation or all Signature Control Systems products and technologies, please visit [www.SignatureControlSystems.com](http://www.SignatureControlSystems.com).
